Ibos!

- Joystick steerable
- Six driven wheels
- 10 x optical zoom
- Remotely adjustable gantry
- Reversing camera
- Picture quality accepted by water authorities

Get a grip with the Revi 1200

The Revi 1200 is the new big brother of the well regarded Revi 550 tractor. It uses the same high performance pan and rotate camera head, extension light head, additional wheel sets, pressure monitoring system and a similar innovative deployment and recovery device. It adds three significant capabilities - full 6WD steerability, a remotely controlled gantry raising ram and a reversing camera situated underneath the cable shackle. The remote control ram allows fine centering adjustment and assists negotiation of intrusions and standing water. Weighing in at a hefty 30 Kg, the Revi 1200 achieves good traction even in deep silt and fat deposits. The Revi 1200 is now the tractor of choice for the most demanding jobs in flat-bottomed culverts where steering is a must.

Options:

Smart Control of pan and rotate provides automatic routines for easy, smooth and accurate inspection of joints and auto-return to forward view.

DigiCan equipped control units can communicate with sensors in the Revi 1200 to display graphical and numerical information about pipe gradient, camera angle and a toppling warning.

See Revi 550 literature for further information.

Compatibility:

- Fully compatible with all Revi 550 cable drums.
- Compatible or minor upgrade required with recent Revi 550 base units.
- All accessories interchangeable with Revi 550 tractor.

Specifications:

Pipe size:	225mm diameter upwards
